

Main model: 2×2D (MaxViT-Tiny) + 1×3D (ResNeXt3D) + CrossGate — ≈ 58.30 M parameters

Shapes: channels first; B = batch. s2 = (2,2,2), s1 = (1,1,1). Seven residual blocks; stride-1 blocks retain identity shortcuts.
Measured with timm 1.0.29: total 58,304,467 parameters; each MaxViT 28,543,736. Inputs: Harvard-GF data_2404; probabilities are symbolic.
